3RD EYE

Daily AWS security monitoring for small teams

SAMPLE REPORT · FICTIONAL DATA

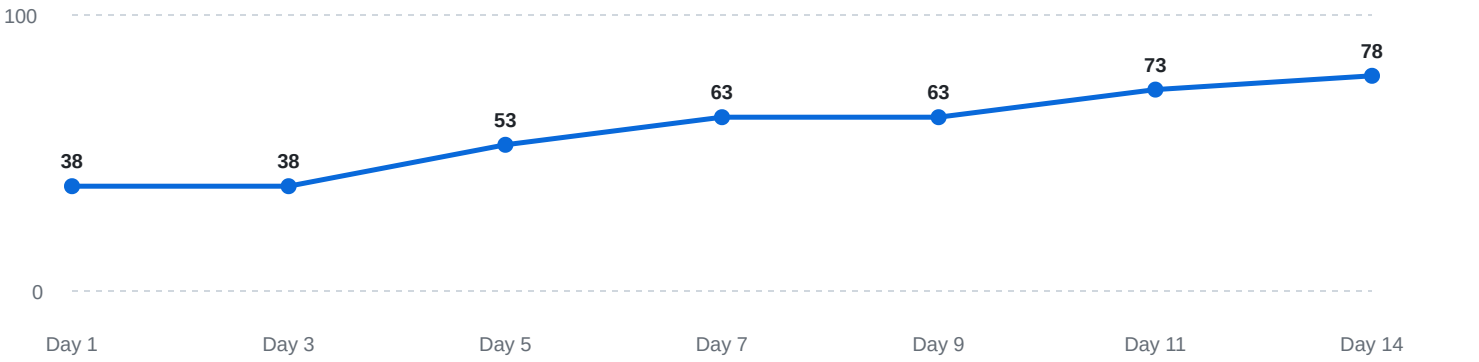

B

78/100

Example Co. · AWS account ending ...4321 · 17 regions scanned · day 14 of monitoring

Score since connecting
38 → 78

Score history

What to fix next, most serious first

HIGH **Access key older than 90 days**
deploy-bot: key ending ...7QXA (412 days old, last used 2025-09-30)
Fix: Rotate the key (create a new one, update its users, delete the old), or delete it if unused.

MEDIUM **Weak password policy**
minimum length is 8 (should be 14+); remembers 0 old passwords (should be 24)
Fix: Update the policy: 14+ characters, all complexity rules, reuse prevention of 24.

LOW **GuardDuty threat detection is off in other regions**
15 region(s) not covered
Fix: Enable GuardDuty in every region you use. Attackers like regions nobody is watching.

Fixed in the first two weeks

- S3 bucket made private: customer-exports
- Root account MFA turned on
- SSH closed to the internet in us-west-2
- EBS default encryption turned on in all regions

Accepted risks (marked as intentional)

[CRITICAL] S3 bucket is public: www-example-co
"Hosts our public marketing website" · approved by J. Rivera, CTO · expires in 90 days

Checks run every morning

ACCEPTED Public S3 buckets
FIX Password policy
FIX Access keys older than 90 days
PASS SSH open to the internet
FIX GuardDuty threat detection
PASS Console users without MFA
PASS Root account
PASS CloudTrail recording all regions
PASS EBS encryption

Read-only, always
3RD EYE can look at your security settings but can never change anything. Remove access anytime by deleting one stack.

Set up in 15 minutes
One-click AWS connection, then a scan every morning, a private portal with MFA, and email alerts when your score drops.
